

Action Points for EMAGE

November 2005 – November 2006

AP1 It is important to continue to add data at the rate achieved during the past year (1000–1500 spatially mapped patterns per year).

AP2 Continued development of specific software tools is equally important. The top priority should be on the following:

- Boolean analysis of overlaps etc
- Searches by similarity with painted domain
- Cluster analysis of similarities
- Simpler Google-type search of database

AP3 Provide pictures in EMAGE of in situs from large-scale screens and other reliable sources that has yet to be spatially mapped.

AP4 Continue to publicise EMAGE through presentations, courses.

AP5 Maintain contacts with other database projects, including chick for which it would be a major advantage to use same approach as EMAGE.
